

## **U.S. CAD Named Integrated Environmental Solutions Reseller**

Company will sell green building design solution to customers in Southern California and Hawaii.

U.S. CAD announced yesterday that the company was named Southern California's and Hawaii's exclusive reseller of building performance modeling software from [Integrated Environmental Solutions](#) (IES). IES software links directly to Autodesk Revit Architecture 2008 and Revit MEP 2008 to provide functionality for sustainable building design.

"U.S. CAD and our customers are at the forefront of the BIM and sustainable design movements, and we're pleased to be the only Autodesk reseller in Southern California and Hawaii to offer the IES Virtual Environment tools," said Daniel Hebert, U.S. CAD's vice-president of building solutions. "Autodesk Revit and IES Virtual Environment enable building professionals to accurately model and visualize their facility, and thereby have more reliable information for design decision-making, energy consumption, construction planning, and, eventually, the facility's management and operation."
